Message from the Guest Editor

Dear Colleagues,

Significant achievements in recent years in the synthesis of diamonds using CVD methods have resulted in easy access to this material. CVD diamond has a number of outstanding properties that enable exceptional performance in diverse applications.

It has been recognized that diamond is a remarkable material with extreme hardness and wear resistance. Other properties such as optical, thermal, electrochemical, chemical, and electronic, also outclass competing materials. Combination of these properties offers designers an engineering material with tremendous potential, offering solutions that can shift performance to new levels or enabling completely new approaches to challenging problems.

This Special Issue invites scientists, designers, and engineers to publish recent achievements concerning material properties and characteristics of single crystal and polycrystalline CVD diamond, and how these can be utilized, focusing particularly on optics, electronics, and electrochemistry, and it is expected to summarize how CVD diamond can be tailored for specific applications, on the basis of the ability to synthesize a consistent and engineered high-performance product.

Message from the Editor-in-Chief

Materials (ISSN 1996-1944) was launched in 2008. The journal covers fourteen comprehensive topics: Biomaterials; Energy Materials; Composites; Structure Analysis; Porous Materials; Manufacturing Processes; Advanced Nanomaterials; Smart Materials; Thin Films; Catalytic Materials; Carbon Materials; Materials Chemistry; Materials Physics; Optics and Photonics; Corrosion; Building Materials. The distinguished and dedicated editorial board and our strict peer-review process ensure the highest degree of scientific rigor and review of all published articles.

Materials provides an unique opportunity to contribute high quality articles and to take advantage of its large readership.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed by the **Science Citation Index Expanded** (Web of Science), **Ei Compendex** and **other databases**. Citations available in **PubMed**, full-text archived in **PubMed Central**.

CiteScore (2018 Scopus data): **3.26**, which equals rank 97/439 (Q1) in 'General Materials Science'.
