Message from the Guest Editors

Zintl phases have received rapidly-increasing attention over the past decade due to their potentially-useful electronic, thermal, as well as magnetic properties. Zintl phases are considered a subset of the intermetallics, with properties ranging from insulating to metallic, but the main premise is the simple idea of ionic and covalent bonding within an intermetallic composition. In the most restrictive definition, Zintl phases are semiconducting intermetallics, where the electropositive cation provides the necessary electrons to the more electronegative metalloids in order to obtain a closed shell electronic configuration.

This Special Issue aims to provide a forum for contributions focused on all aspects of Zintl phases, both traditional Zintl phases and those that can be included with an expanded definition (containing transition metals, rare earths, etc.), including new experimental and theoretical research that advances the understanding of the synthesis, structure, properties, as well as applications of materials that can be described as Zintl phases or variants thereof.

Materials (ISSN 1996-1944) was launched in 2008. The journal covers fourteen comprehensive topics: Biomaterials; Energy Materials; Composites; Structure Analysis; Porous Materials; Manufacturing Processes; Advanced Nanomaterials; Smart Materials; Thin Films; Catalytic Materials; Carbon Materials; Materials Chemistry; Materials Physics; Optics and Photonics; Corrosion; Building Materials. The distinguished and dedicated editorial board and our strict peer-review process ensure the highest degree of scientific rigor and review of all published articles.

Materials provides an unique opportunity to contribute high quality articles and to take advantage of its large readership.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: indexed by the Science Citation Index Expanded (Web of Science), Ei Compendex and other databases. For more info on the journal’s Impact Factor, see here. Citations to become available in PubMed soon, full-text archived in PubMed Central.

Rapid publication: manuscripts are peer-reviewed; a first decision is provided to authors approximately 14.2 days after submission; acceptance to publication in 5 days (median values for papers published in materials in the second half of 2018).
