Biocompatible Surface Functionalization of Nanomaterials

Guest Editor:

Dr. Giuseppe Bardi

Nanobiointeractions & Nanodiagnostics, Istituto Italiano di Tecnologia, Via Morego 30, 16163 Genova, Italy

Deadline for manuscript submissions:

closed (15 June 2019)

Message from the Guest Editor

As we know, many nanotools contain toxic materials or specific dangerous synthesis by-products. biocompatibility is needed to prepare successful nanoproducts for application in the biomedical field. This goal obtained by providing specific functionalization of the nanomaterials aimed at confining or abrogate their core toxicity. Common techniques of surface coating are currently exploited biocompatible polymers, organic or biological molecules. These procedures are not always effective in biological environments. Major difficulties are related to the dispersion/aggregation of nanomaterials in colloidal suspensions and the stability of biocompatible moieties.

The present Special Issue is aimed at providing novel approaches to biocompatible nanomaterials' functionalization. The focus is on the biocompatibility, immune escape or immune-stimulation, and enhanced performances of nanomaterials for biomedical applications. Innovative research articles, as well as critical reviews of the literature, will be welcome to provide an expert opinion and critical discussion.

Message from the Editor-in-Chief

Materials (ISSN 1996-1944) was launched in 2008. The iournal covers twenty-five comprehensive biomaterials, energy materials, advanced composites. advanced materials characterization, porous materials, manufacturing processes and systems. nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials. materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. Materials provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, CaPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

Journal Rank: JCR - Q2 (*Metallurgy & Metallurgical Engineering*) / CiteScore - Q2 (*Condensed Matter Physics*)
