submissions:

closed (30 June 2020)

Message from the Guest Editor

Great importance in corrosion protection is enabling of uniform formation of film and its higher chemical stability in corrosive environments. This can be achieved by surface pre-treatment or modification of microstructure of substrate. Thus, this Special Issue focuses on not only a novel corrosion protection or coating technology to improve corrosion resistance of the light metals but also corrosion mechanism of light metals responsible for improvement of corrosion resistance and for the effect of corrosion protection by surface pre-treatment or modification of microstructure of substrate.

Keywords

- Light metals
- Corrosion Protection
- Coating
- Corrosion Resistance
- Corrosion
- Microstructure

Message from the Editor-in-Chief

Materials (ISSN 1996-1944) was launched in 2008. The journal covers twenty-five comprehensive topics: biomaterials, energy materials, advanced composites, advanced materials characterization, porous materials, manufacturing processes and systems, advanced nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials, materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. *Materials* provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, CaPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

Journal Rank: JCR - Q1 (Metallurgy and Metallurgical Engineering) / CiteScore - Q2 (*Condensed Matter Physics*)
