# Detectors for Assessment of Natural Radioactivity in Drinking Water: Materials and Method

Guest Editors:

#### Prof. Dr. Francesco Caridi

Department of Mathematics and Informatics, University of Messina, Physics and Earth Sciences (MIFT), Viale F. Stagno d'Alcontres, 31-98166 Messina, Italy

### Dr. Michele Guida

Laboratory "Ambients and Radiations (AmbRa)", Department of Computer Engineering, Electrical Engineering and Applied Mathematics (DIEM), University of Salerno, 84084 Fisciano, Italy

Deadline for manuscript submissions:

closed (20 November 2021)

## **Message from the Guest Editors**

Dear Colleagues,

The presence of radionuclides in water constitutes a health risk to the population because the consumption of such water increases the likelihood of cancer. Experimental analysis will enhance the detection of significant radionuclides that cause harm to the population and stimulate remediation

Among the various analytical techniques for assessment of natural radioactivity in drinking water, alpha and gamma spectrometry are employed to obtain the specific activity of alpha and gamma radionuclides, respectively; liquid scintillation counting (LSC) can be used to quantify the activity concentration of tritium, radon, and gross alpha and beta; total alpha/beta counting, with the thick source method, can be used for the gross alpha and beta specific activity evaluation; and emanometry, in the H<sub>2</sub>O setup configuration, can be employed to estimate the gas radon activity concentration.

Dr. Francesco Caridi *Guest Editor*

2. Faculty of Dentistry and Oral Health Sciences, McGill University, 3640 Rue University, Montreal, QC H3A 0C7, Canada

## **Message from the Editor-in-Chief**

Materials (ISSN 1996-1944) was launched in 2008. The iournal covers twenty-five comprehensive biomaterials, energy materials, advanced composites. advanced materials characterization, porous materials, manufacturing processes and systems. nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials. materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. Materials provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

## **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, CaPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

**Journal Rank:** JCR - Q2 (*Metallurgy & Metallurgical Engineering*) / CiteScore - Q2 (*Condensed Matter Physics*)
