DLC (Diamond-Like Carbon) Film Formation and Application

Message from the Guest Editor

This Special Issue on “DLC (Diamond-Like Carbon) Film Formation and Application” will address advances in materials science, formation, characterization, standardization, and application of DLC films. DLC films have been the subject of considerable attention because of their exceptional mechanical properties, such as low friction coefficient and high wear resistance. DLC technology represents one of the most appropriate approaches to reduce energy consumption of various products. To enhance the application of DLC films, it will be important to overcome four issues noted as follows: i) low-cost and reliable coatings, ii) multifunctional coatings, iii) understanding the structure and tribological behavior, and iv) standardization. Original papers are solicited on formation, evaluation, and application of all types of DLC films, including tetrahedral amorphous carbon films and hydrogenated amorphous carbon films. Of particular interest are recent developments in the DLC coating process, tribological property investigation, and application. Articles and reviews dealing with characterization, classification, and structural analyses are very welcome.
Editor-in-Chief

Prof. Dr. Maryam Tabrizian
James McGill Professor, Professor of Biomedical Engineering, Professor of Bioengineering, Professor of Experimental Surgery, Department of Biomedical Engineering, Faculty of Medicine/Faculty of Dentistry, Duff Medical Science Building, 3775 University Street, Montreal, QC H3A 2B4, Canada

Materials (ISSN 1996-1944) was launched in 2008. The journal covers twenty comprehensive topics: biomaterials, energy materials, advanced composites, structure analysis and characterization, porous materials, manufacturing processes and systems, advanced nanomaterials, smart materials, thin films and interfaces, catalytic materials and carbon materials, materials chemistry, materials physics, optics and photonics, corrosion and materials degradation, construction and building materials, materials simulation and design, electronic materials, advanced and functional ceramics, metals and alloys, general. The distinguished and dedicated editorial board and our strict peer-review process ensure the highest degree of scientific rigor and review of all published articles. Materials provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

Author Benefits

Open Access:— free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubMed, PMC, CaPlus / SciFinder, Inspec, Astrophysics Data System, and many other databases.

Journal Rank: JCR - Q1 (Metallurgy & Metallurgical Engineering) / CiteScore - Q2 (Condensed Matter Physics)
