Deadline for manuscript submissions: closed (31 October 2019)

Message from the Guest Editor

Recent disasters caused by the spread of fire in buildings and in transportations remind us of the importance of fire protection. Using flame-retardant materials presents one important element of the firefighting strategy, which aims at preventing fire development and propagation. These materials are used in different applications, such as in textiles, coatings, foams, furniture, and cables.

The development of more efficient and environmentally friendly flame-retardant additives is an active multidisciplinary approach that has attracted a great deal of interest. Works aims at the development of new, sustainable, flame-retardant additives/materials, providing high performances and low toxicity. These also concern studying their properties during ageing and recycling, as well as modeling physical and chemical processes taking place before ignition and during their combustion.

**Message from the Editor-in-Chief**

*Materials* (ISSN 1996-1944) was launched in 2008. The journal covers fourteen comprehensive topics: Biomaterials; Energy Materials; Composites; Structure Analysis; Porous Materials; Manufacturing Processes; Advanced Nanomaterials; Smart Materials; Thin Films; Catalytic Materials; Carbon Materials; Materials Chemistry; Materials Physics; Optics and Photonics; Corrosion; Building Materials. The distinguished and dedicated editorial board and our strict peer-review process ensure the highest degree of scientific rigor and review of all published articles.

*Materials* provides an unique opportunity to contribute high quality articles and to take advantage of its large readership.

**Author Benefits**

**Open Access**: free for readers, with article processing charges (APC) paid by authors or their institutions.

**High visibility**: indexed by the Science Citation Index Expanded (Web of Science), Ei Compendex and other databases. Citations available in PubMed, full-text archived in PubMed Central.

**CiteScore** (2018 Scopus data): **3.26**, which equals rank 97/439 (Q1) in 'General Materials Science'.
