Hybrid Iron-Based Superconductors

Guest Editor:

Message from the Guest Editor

Prof. Anna Krztoń-Maziopa Politechnika Warszawska, Warsaw, Poland

Deadline for manuscript submissions: closed (20 March 2022) Hybrid organic–inorganic iron-based superconductors belong to the growing family of layered iron chalcogenides that over the last decade have been a subject of unflagging interest in the field of solid-state chemistry and physics. Several structural models, partly supported by theoretical calculations, have already been solved for a few of these hybrid phases, while for the others they are still under development. Latest reports on monolayers prepared from parent iron chalcogenides suggest that even higher values of transition temperatures to superconducting state can be expected in hybrid 2-D systems obtained via chemical routes, where upon intercalation large organic molecules push apart the inorganic slabs resulting in the formation of alternating stacks of practically single iron-chalcogenide layers separated by organics.

Message from the Editor-in-Chief

Materials (ISSN 1996-1944) was launched in 2008. The iournal covers twenty-five comprehensive topics: biomaterials, energy materials, advanced composites. advanced materials characterization, porous materials, manufacturing processes and svstems. advanced nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials. materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. Materials provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, CaPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

Journal Rank: JCR - Q2 (*Metallurgy & Metallurgical Engineering*) / CiteScore - Q2 (*Condensed Matter Physics*)
