Metallic Nanowires and Their Applications

Guest Editors:

Prof. Dr. Sebastian Maćkowski
1. Faculty of Physics, Astronomy and Informatics, Nicholas Copernicus University, Grudziadzka 5, 87-100 Torun, Poland
2. Baltic Institute of Technology, al. Zwyciestwa 96/98, 81-451 Gdynia, Poland

Prof. Joanna Niedziółka-Jönsson
Institute of Physical Chemistry, Polish Academy of Sciences, Kasprzaka 44/52, 01-224 Warsaw, Poland

Deadline for manuscript submissions:
closed (15 June 2019)

Message from the Guest Editors

Metallic nanowires are unique materials in the large family of plasmonic nanostructures. First of all, they exhibit plasmon resonance, which is rather broad, covering the visible spectral range and even stretching out to the infrared. In addition, their tens-of-microns lengths facilitate efficient propagation of energy via surface plasmon polaritons over distances much larger than the optical resolution of microscopy systems. This property allows for remote optical addressing and readout, as well as photoactivation of light-dependent processes. Last, but not least, the positions of the nanowires can be determined with relatively simple optical systems, making them applicable as geometric platforms. The combination of all three characteristics of metallic nanowires has led to a multitude of fundamental and applied research, with the latter focusing primarily on optoelectronics, photovoltaics and sensorics. Therefore, we invite you to submit manuscripts for this Special Issue. Full papers, communications, and reviews are all welcome.

Editor-in-Chief

Prof. Dr. Maryam Tabrizian
1. Department of Biomedical Engineering, Faculty of Medicine and Health Sciences, McGill University, Montreal, QC H3A 2B6, Canada
2. Faculty of Dentistry and Oral Health Sciences, McGill University, 3640 Rue University, Montreal, QC H3A 0C7, Canada

Message from the Editor-in-Chief

Materials (ISSN 1996-1944) was launched in 2008. The journal covers twenty-five comprehensive topics: biomaterials, energy materials, advanced composites, advanced materials characterization, porous materials, manufacturing processes and systems, advanced nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials, materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. *Materials* provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, CaPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.
Journal Rank: JCR - Q1 (Metallurgy and Metallurgical Engineering) / CiteScore - Q2 (*Condensed Matter Physics*)
