#### Message from the Guest Editor

Nanophotonics and Nanoelectronics refer to nanometer feature size structures commensurate with the wavelength of light or electrons and offer unique advantages when they are being used to manage light and electrons movement and localisation. The materials that are used to realise such structures tend to be metals and dielectrics. (including semiconductors and insulators). Electronic nanostructures include 2D materials, nanowires, quantumconfined heterostructures and reveal fascinating properties from traditional quantum transport to correlated effects, including spintronics, and Majorana Fermions. The design of nanostructures for quantum information is a burgeoning field that looks to control over electrons degrees of freedom by local and global interactions. In many of the cases of both photonic and electronic artificial nanostructures, surfaces and interfaces and their control play an important role in determining behaviour.

# Keywords

- spintronic
- surface plasmon
- photonic nanowires
- photonic cavities
- quantum confined nanostructures
- majorana Fermions
- transport in semiconductor nanowires

Materials (ISSN 1996-1944) was launched in 2008. The iournal covers twenty-five comprehensive topics: biomaterials, energy materials, advanced composites. advanced materials characterization, porous materials, manufacturing processes and svstems. advanced nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials. materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. Materials provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

### **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, CaPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

**Journal Rank:** JCR - Q2 (*Metallurgy & Metallurgical Engineering*) / CiteScore - Q2 (*Condensed Matter Physics*)
