Supplementary Cementitious Materials in Concrete

Message from the Guest Editors

Dear Colleagues,

The substitution strategy, consisting of the partial replacement of Portland cement with supplementary cementitious materials (SCMs) or the more common application of blended cements, is an effective way to improve the sustainability of the cement and concrete industries.

The forthcoming Special Issue of Materials aims to recognize the current state of knowledge and development in the use of SCMs within the substitution and performance strategies. It is our pleasure to invite you to submit your research article, communication, or review in which the following aspects of SCMs are investigated:

- Measuring the chemical, physical and mineralogical properties of SCMs, before and after hydration;
- Defining the amounts and the types of SCMs in accordance with the desired effects on fresh and hardened concrete performances;
- Designing structural elements made with normal and high-performance concretes containing SCMs;
- Assessing the durability and environmental impact of cement-based materials and structures, when SCMs are used to substitute, or in conjunction with, hydraulic cements.

Message from the Editor-in-Chief

Materials (ISSN 1996-1944) was launched in 2008. The journal covers twenty comprehensive topics: biomaterials, energy materials, advanced composites, structure analysis and characterization, porous materials, manufacturing processes and systems, advanced nanomaterials, smart materials, thin films and interfaces, catalytic materials and carbon materials, materials chemistry, materials physics, optics and photonics, corrosion and materials degradation, construction and building materials, materials simulation and design, electronic materials, advanced and functional ceramics, metals and alloys, general. The distinguished and dedicated editorial board and our strict peer-review process ensure the highest degree of scientific rigor and review of all published articles. Materials provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

Author Benefits

Open Access:— free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubMed, PMC, CaPlus / SciFinder, Inspec, Astrophysics Data System, and many other databases.

Journal Rank: JCR - Q2 (Materials Science, Multidisciplinary) / 2020 CiteScore - Q2 (Condensed Matter Physics)
