Special Issue

Functional Materials Sintered by FAST/SPS—From Research to Industry

Message from the Guest Editor

This Special Issue addresses several topics related to FAST/SPS technology and related advanced sintering technologies, materials, and finished products. FAST/SPS is a powder metallurgy technique in which a loose or loosely bonded powder is consolidated under external pressure at an elevated temperature (below the melting point). The FAST/SPS technique is considered to be a key technology for a new generation of materials (metals and alloys, ceramics, composites, semiconductors, etc.). The organizers of the **2nd Conference on FAST/SPS: From Research to Industry** invite everyone interested in the conference's topic, particularly academic and research institutions as well as companies using FAST/SPS technology, to participate. This year's second conference edition will only be in a **stationary form in Warsaw, Poland**. We invite all of the conference participants to publish their research in the Special Issue of *Materials* (impact factor: 3.748) dedicated to "FAST/SPS: From Research to Industry".

About the Journal

Message from the Editor-in-Chief

Materials (ISSN 1996-1944) was launched in 2008. The journal covers twenty-five comprehensive topics: biomaterials, energy materials, advanced composites, advanced materials characterization, porous materials, manufacturing processes and systems, advanced nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials, materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. *Materials* provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

Editor-in-Chief

Prof. Dr. Maryam Tabrizian
1. Department of Biomedical Engineering, Faculty of Medicine and Health Sciences, McGill University, Montreal, QC H3A 2B6, Canada
2. Faculty of Dentistry and Oral Health Sciences, McGill University, 3640 Rue University, Montreal, QC H3A 0C7, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, CaPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) / CiteScore - Q1 (Condensed Matter Physics)
