Special Issue

Relation Between Hydraulic Endodontic Sealers and Build Up of Endodontically Treated Teeth

Message from the Guest Editors

In recent years, hydraulic endodontic sealers have been introduced in daily dentistry and have been well-received by endodontists and practitioners. Many in vitro studies have shown their chemical and mechanical properties, and other tests performed in vivo have shown their biological characteristics, clinical behavior, and outcomes. Almost all of these investigations concentrated on the “endodontic and biological aspects” of these new sealers, but the possible role of hydraulic endodontic sealers on the bonding steps required to build up endodontically treated teeth is still uncertain, and many questions have been raised by scientists and clinicians as well. Studies about bonding to root canal dentins, such as those on bond strength, leakage, radiopacity, compatibility among different types of hydraulic endodontic sealers with different bonding systems, procedures to clean the post space, type of restorative materials to be used, etc., are still yet to be performed. Lastly, randomized controlled trials are desirable to confirm (or not) lab findings. For this purpose, you are invited to contribute your valuable and important articles to this Special Issue.

Guest Editors

Prof. Dr. Marco Ferrari

Department of Prosthodontics & Dental Material, University School of Dental Medicine, University of Siena, 53100 Siena, Italy

Dr. Denise Pontoriero

About the Journal

Message from the Editor-in-Chief

Materials (ISSN 1996-1944) was launched in 2008. The journal covers twenty-five comprehensive topics: biomaterials, energy materials, advanced composites, advanced materials characterization, porous materials, manufacturing processes and systems, advanced nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials, materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. *Materials* provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

Editor-in-Chief

Prof. Dr. Maryam Tabrizian
1. Department of Biomedical Engineering, Faculty of Medicine and Health Sciences, McGill University, Montreal, QC H3A 2B6, Canada
2. Faculty of Dentistry and Oral Health Sciences, McGill University, 3640 Rue University, Montreal, QC H3A 0C7, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, CaPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) / CiteScore - Q1 (Condensed Matter Physics)
