Special Issue

Metal Catalysts for High-Performance Batteries

Message from the Guest Editor

Since 1990s, lithium-ion batteries (LIBs) have been successfully commercialized in the energy storage market. However, current LIBs with a cell-level energy density of 150–250 Wh kg−1 offer a drive range of 300 to 600 km for electric vehicles (for example, LIBs in Tesla electric vehicles have cell-level energy densities of ~250 Wh kg−1), which is insufficient for achieving a 500-mile drive distance per charge with a reasonable battery pack size to alleviate range anxiety. The capacity of traditional electrode materials has nearly reached the limit value. Therefore, new high-energy-density batteries are urgently required to satisfy the ever-increasing demand. Alternatively, metal catalysts, which can be introduced into metal–sulfur (for example, Li-S batteries) batteries to boosts their electrochemical performance, provide an avenue for exploration for the invention of new rechargeable batteries.

About the Journal

Message from the Editorial Board

Materials (ISSN 1996-1944) was launched in 2008. The journal covers twenty-five comprehensive topics: biomaterials, energy materials, advanced composites, advanced materials characterization, porous materials, manufacturing processes and systems, advanced nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials, materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. *Materials* provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

Editors-in-Chief

Prof. Dr. Maryam Tabrizian
1. Department of Biomedical Engineering, Faculty of Medicine and Health Sciences, McGill University, Montreal, QC H3A 2B6, Canada
2. Faculty of Dentistry and Oral Health Sciences, McGill University, 3640 Rue University, Montreal, QC H3A 0C7, Canada

Prof. Dr. Yuguang Ma
State Key Laboratory of Luminescent Materials and Devices, South China University of Technology, Guangzhou 510640, China

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, CaPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) / CiteScore - Q1 (Condensed Matter Physics)
