

Special Issue

Corrosion and Tribological Behaviour of Materials

Message from the Guest Editors

This Special Issue is focused on publishing and the dissemination of high-quality and novel research articles covering but not limited to micro and nano-scale corrosion, degradation of engineering materials, climatic reliability of materials, high-resolution electrochemical techniques, condition monitoring, materials' tribological performance under various modes of operations, nano-tribology, contact mechanics and experimental and mathematical modeling. This Special Issue fosters communication and the sharing of groundbreaking ideas among engineers and scientists globally involved in advancing corrosion and tribology-based science and technology.

About the Journal

Message from the Editor-in-Chief

Materials (ISSN 1996-1944) was launched in 2008. The journal covers twenty-five comprehensive topics: biomaterials, energy materials, advanced composites, advanced materials characterization, porous materials, manufacturing processes and systems, advanced nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials, materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. *Materials* provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, CaPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /
CiteScore - Q1 (Condensed Matter Physics)
