Special Issue

Phosphate Nanomaterials: Synthesis, Properties, and Applications

Message from the Guest Editors

This Special Issue in the journal *Materials* delves into the cutting-edge developments surrounding phosphate nanomaterials. Researchers from around the globe have contributed their insights on synthesis, characterization, functionalization, and applications of these versatile nanomaterials. From catalysis to energy storage and biomedical applications, this collection explores the diverse range of uses for phosphate-based nanomaterials. With a focus on both fundamental science and practical applications, this issue serves as a comprehensive resource for those interested in the latest breakthroughs in this field.

About the Journal

Message from the Editor-in-Chief

Materials (ISSN 1996-1944) was launched in 2008. The journal covers twenty-five comprehensive topics: biomaterials, energy materials, advanced composites, advanced materials characterization, porous materials, manufacturing processes and systems, advanced nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials, materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. *Materials* provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, CaPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) / CiteScore - Q1 (Condensed Matter Physics)
