Special Issue

Nanomaterials for Enhanced Photodynamic Therapy

Message from the Guest Editor

The need for adapted and improved chemical nanosystems for therapeutic applications is of high importance in the field of medicine, as classical treatments are too invasive with significant side-effects. Photodynamic therapy (PDT) provides an alternative treatment through the synergy of three essential components: i) the photosensitizer (PS) or a light-activated drug, ii) an appropriate wavelength to activate the PS, and iii) oxygen, which is the terminal generator of toxic species. The use of the new generation of photosensitizers associated with different types of delivery vehicles has received strong interest within the field of the PDT. This Special Issue on “Nanomaterials for Enhanced Photodynamic Therapy” will provide an overview of recent advances and cutting-edge approaches that allow better studying of nanodevices and their use in PDT. Both original research articles and comprehensive reviews pertaining to a relevant topic within this field are welcome. We look forward to reading your contributions.

About the Journal

Message from the Editorial Board

Materials (ISSN 1996-1944) was launched in 2008. The journal covers twenty-five comprehensive topics: biomaterials, energy materials, advanced composites, advanced materials characterization, porous materials, manufacturing processes and systems, advanced nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials, materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. *Materials* provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

Editors-in-Chief

Prof. Dr. Maryam Tabrizian
1. Department of Biomedical Engineering, Faculty of Medicine and Health Sciences, McGill University, Montreal, QC H3A 2B6, Canada
2. Faculty of Dentistry and Oral Health Sciences, McGill University, 3640 Rue University, Montreal, QC H3A 0C7, Canada

Prof. Dr. Yuguang Ma
State Key Laboratory of Luminescent Materials and Devices, South China University of Technology, Guangzhou 510640, China

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, CaPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) / CiteScore - Q1 (Condensed Matter Physics)
