

Special Issue

Carbon Nanomaterials for Imaging and Sensing

Message from the Guest Editors

This Special Issue is focused on the application of carbon nanomaterials to biomaging and sensing. We aim at gathering contributions from renown researchers in the field to make this issue a reference for all those working in fundamental and applied research on carbon nanomaterials. We welcome the submission of papers dedicated to the tailoring of the physico-chemical properties of carbon nanomaterials towards application in imaging and sensing in biological media. We want this issue to reflect the plethora of carbon nanomaterials and the diversity of strategies followed to improve their performance.

About the Journal

Message from the Editor-in-Chief

Materials (ISSN 1996-1944) was launched in 2008. The journal covers twenty-five comprehensive topics: biomaterials, energy materials, advanced composites, advanced materials characterization, porous materials, manufacturing processes and systems, advanced nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials, materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. *Materials* provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.
