Advances in Friction and Wear Behaviors of Metallic Materials and Coatings

Message from the Guest Editors

This Special Issue of *Materials* concentrates on novel technologies, new findings and applications in the field of friction and wear in metallic materials and coatings. We are delighted to invite contributions to this Special Issue on “Advances in Friction and Wear Behaviors of Metallic Materials and Coatings”. Here, we will underline recent advances related to friction, wear, lubrication, coatings and film, and damage induced by interfaces. Research topics of interest may include, but are not limited to: tribology, friction, wear, coatings, film, lubrication, damage, surface engineering, wear mechanisms, test devices, and measurements of tribology.

About the Journal

Message from the Editor-in-Chief

Materials (ISSN 1996-1944) was launched in 2008. The journal covers twenty-five comprehensive topics: biomaterials, energy materials, advanced composites, advanced materials characterization, porous materials, manufacturing processes and systems, advanced nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials, materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. *Materials* provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.
