Special Issue

Advanced Battery Materials: Preparation, Optimization and Recycling

Message from the Guest Editors

Advanced battery technologies employ diverse electrode materials, electrolytes, and additives. For critical applications in electric vehicles, portable electronics, and energy storage systems, the focus lies on high-capacity cathodes, durable anodes, and novel electrolytes. These encompass transition metal oxides, carbon-based materials, solid-state electrolytes, and multifunctional composites featuring intricate microstructures, such as nanostructured coatings and conductive polymer blends. Analyzing these materials—characterized by varied properties, morphologies, and sizes (e.g., lithium-ion battery electrodes)—requires consideration of electrode–electrolyte interfaces under diverse operating conditions, including charge–discharge cycles, temperature extremes, mechanical stress, and voltage fluctuations. This Special Issue aims to elucidate the fundamental principles governing material synthesis, performance optimization, and recycling processes. Crucially, macroscopic properties such as energy storage capacity and cycle stability are governed by underlying mechanisms operating across multiple sub-observational scales.

About the Journal

Message from the Editorial Board

Materials (ISSN 1996-1944) was launched in 2008. The journal covers twenty-five comprehensive topics: biomaterials, energy materials, advanced composites, advanced materials characterization, porous materials, manufacturing processes and systems, advanced nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials, materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. *Materials* provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

Editors-in-Chief

Prof. Dr. Maryam Tabrizian
1. Department of Biomedical Engineering, Faculty of Medicine and Health Sciences, McGill University, Montreal, QC H3A 2B6, Canada
2. Faculty of Dentistry and Oral Health Sciences, McGill University, 3640 Rue University, Montreal, QC H3A 0C7, Canada

Prof. Dr. Yuguang Ma
State Key Laboratory of Luminescent Materials and Devices, South China University of Technology, Guangzhou 510640, China

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, CaPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) / CiteScore - Q1 (Condensed Matter Physics)
