Modelling Polysaccharides-Based Hydrogels: From Preparation to Biomedical Applications

Message from the Guest Editors

Hydrogels, thanks to their natural-tissue-like soft consistency and cell-loving attributes, have emerged as the most potential scaffolding substrate for three-dimensional cell culture in tissue engineering. The nature and structure of the material are essential to determine the efficiency of the scaffolds for cell spreading, proliferation, and differentiation in vivo. Among the specific scaffold requirements, interconnected open porosity is a necessary property to allow cell ingrowth and adequate vascularization, and it is also preferable that the scaffold biodegrade at a controllable rate that approximates the rate of tissue regeneration eventually creating space for new tissue growth. This Special Issue is dedicated to the design and development of advanced customized hydrogel-based scaffolds and their applications for osteogenic/chondrogenic differentiation in vitro and in vivo. Contributions regarding innovative materials for tissue regeneration and various aspects of their interactions with different cell types and tissues are welcome.

About the Journal

Message from the Editor-in-Chief

Materials (ISSN 1996-1944) was launched in 2008. The journal covers twenty-five comprehensive topics: biomaterials, energy materials, advanced composites, advanced materials characterization, porous materials, manufacturing processes and systems, advanced nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials, materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. *Materials* provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

Editor-in-Chief

Prof. Dr. Maryam Tabrizian

1. Department of Biomedical Engineering, Faculty of Medicine and Health Sciences, McGill University, Montreal, QC H3A 2B6, Canada
2. Faculty of Dentistry and Oral Health Sciences, McGill University, 3640 Rue University, Montreal, QC H3A 0C7, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, CaPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /
CiteScore - Q1 (Condensed Matter Physics)
