Synthesis, Characterization, and Application of 2D Magnetic Materials

Message from the Guest Editor

Two-dimensional (2D) magnetic materials have only emerged in recent years. This rapidly developing group of materials has attracted a high level of interest due to their novel 2D magnetic properties and possible applications as ultrathin magnetic materials in electronics and photonics. This Special Issue will cover this fast-evolving field, with a focus on the synthesis, characterization, and application of 2D magnetic materials. Works from Physics, Chemistry, and Materials Science and Engineering are welcome, including interdisciplinary projects.

About the Journal

Message from the Editor-in-Chief

Materials (ISSN 1996-1944) was launched in 2008. The journal covers twenty-five comprehensive topics: biomaterials, energy materials, advanced composites, advanced materials characterization, porous materials, manufacturing processes and systems, advanced nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials, materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. *Materials* provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.
