Special Issue

Advanced Techniques in Health Monitoring of Composite Structures

Message from the Guest Editors

Composite structures are susceptible to complex damage and failure modes during the manufacturing and service processes. Some typical defects of the composite structure include matrix cracking, fiber breakage, delamination, etc., which can deteriorate the integrity of the structure and cause catastrophic failures. The continuous monitoring of composite structure health conditions aids in identifying such damages early, and taking appropriate measures to prolong their service life. Advanced artificial intelligence techniques have been extensively integrated into health monitoring systems to enhance the performance of composite structures. A basic health monitoring process for composite structures coves data acquisition via sensing technologies, data-processing and analysis, and decision-making. This Special Issue aims to present recent advanced models, methods, and technologies related to the health monitoring of composite structures for structural safety and integrity.

About the Journal

Message from the Editor-in-Chief

Materials (ISSN 1996-1944) was launched in 2008. The journal covers twenty-five comprehensive topics: biomaterials, energy materials, advanced composites, advanced materials characterization, porous materials, manufacturing processes and systems, advanced nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials, materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. *Materials* provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

Editor-in-Chief

Prof. Dr. Maryam Tabrizian
1. Department of Biomedical Engineering, Faculty of Medicine and Health Sciences, McGill University, Montreal, QC H3A 2B6, Canada
2. Faculty of Dentistry and Oral Health Sciences, McGill University, 3640 Rue University, Montreal, QC H3A 0C7, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, CaPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) / CiteScore - Q1 (Condensed Matter Physics)
