Biopolymers for Technology Applications

Message from the Guest Editors

Biopolymers are organic molecules that are composed of repeating monomers and produced by living organisms, and they have many applications in different research fields. In this Special Edition, we are aiming to receive papers including experimental and theoretical studies on the fundamental behavior as well as applications of biopolymers, coming from the interdisciplinary physical chemistry, biochemical, biophysical, and biomedical research communities. About the Journal

Message from the Editor-in-Chief

Materials (ISSN 1996-1944) was launched in 2008. The journal covers twenty-five comprehensive topics: biomaterials, energy materials, advanced composites, advanced materials characterization, porous materials, manufacturing processes and systems, advanced nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials, materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. *Materials* provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.
