

## Special Issue

# Protein Adsorption on Materials and Its Applications

### Message from the Guest Editor

The protein adsorption at the solid–liquid interface has a long history, from the origin of life to modern high-performance materials for industry. It is an old but exciting and active field of research thanks to various applications. Usually, protein adsorption is used as a simple route to improve properties of materials, such as catalysts for waste matter degradation or biofuel production, biosensors, improving colloid stability, etc. Protein adsorption is sometimes banned, when it induces membrane fouling or a corona around the nanoparticles. It is also the first step in the response to artificial material in implants or nanoparticle injections. The broad range of types of protein and the lack of a typical behavior make it an endless topic. This Special Issue aims to offer a unique platform to discuss all the aspects of Protein Adsorption on Materials, covers broad applications involving protein adsorption on material, the protein corona, as well as strategies to reduce fouling by protein. We also aim for contributions on the more fundamental aspects of kinetics, the mechanisms of protein adsorption and the impact on their structure and/or properties.

### Guest Editor

Dr. Sebastien Balme

European Institute of Membranes, University of Montpellier, 34095 Montpellier, France

### Deadline for manuscript submissions

closed (30 June 2021)

## About the Journal

### Message from the Editor-in-Chief

*Materials* (ISSN 1996-1944) was launched in 2008. The journal covers twenty-five comprehensive topics: biomaterials, energy materials, advanced composites, advanced materials characterization, porous materials, manufacturing processes and systems, advanced nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials, materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. *Materials* provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

### Editor-in-Chief

Prof. Dr. Maryam Tabrizian

1. Department of Biomedical Engineering, Faculty of Medicine and Health Sciences, McGill University, Montreal, QC H3A 2B6, Canada
2. Faculty of Dentistry and Oral Health Sciences, McGill University, 3640 Rue University, Montreal, QC H3A 0C7, Canada

---

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, CaPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

#### Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /  
CiteScore - Q1 (Condensed Matter Physics)
