# Trends on the Wood Materials and Technologies

### Message from the Guest Editors

The woodworking industry uses many materials to produce finished products with improved properties and increased resistance. Not only “dry” methods, e.g., using films, laminates, modified veneers, foams as cladding materials, but also “wet” methods, using varnish products, are used to finishing wood materials. Nanotechnology achievements are used to increase resistance to mechanical and thermal factors as well as for the safety of users. Considering the scarcity of wood, non-wood materials are of necessary interest. With regard to environmental protection aspects, it is necessary to use environmentally friendly materials. At the same time, the threat of environmental pollution requires the development of formulas for resins, adhesives, and lacquer products as well as the technology of their application and curing in the production of wood based materials and the construction of furniture and large-size elements. The obtained final products should show increased resistance to mechanical, thermal, and chemical factors. In case of defects, the use of retouching agents is proposed.

### Guest Editors

Dr. Tomasz Krystofiak

Department of Wood Science and Thermal Techniques, Faculty of Forestry and Wood Technology, Poznan University of Life Sciences, Wojska Polskiego 28, 60-637 Poznan, Poland

Dr. Edward Roszyk

Department of Wood Science and Thermal Techniques, Faculty of Forestry and Wood Technology, Poznan University of Life Sciences, Wojska Polskiego 28, 60-637 Poznan, Poland

### Deadline for manuscript submissions

closed (20 July 2023)

## About the Journal

### Message from the Editorial Board

*Materials* (ISSN 1996-1944) was launched in 2008. The journal covers twenty-five comprehensive topics: biomaterials, energy materials, advanced composites, advanced materials characterization, porous materials, manufacturing processes and systems, advanced nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials, materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. *Materials* provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

### Editors-in-Chief

Prof. Dr. Maryam Tabrizian

1. Department of Biomedical Engineering, Faculty of Medicine and Health Sciences, McGill University, Montreal, QC H3A 2B6, Canada
2. Faculty of Dentistry and Oral Health Sciences, McGill University, 3640 Rue University, Montreal, QC H3A 0C7, Canada

Prof. Dr. Yuguang Ma

State Key Laboratory of Luminescent Materials and Devices, South China University of Technology, Guangzhou 510640, China

---

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, CaPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

#### Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /  
CiteScore - Q1 (Condensed Matter Physics)
