submissions:

closed (30 June 2022)

Message from the Guest Editors

In mechanism and machine science, theoretical and computational analysis leads to problems where mathematical modelling and processing are transcendent aspects for solving these problems.

The different ways of approaching problems in the area of mechanical engineering, or related areas, include the use of integral and differential equations; interpolation; polynomial computation; least squares and regularization; vector algebra; matrix equations; control theory; synthesis process; discrete and continuous transforms; image and signal processing; Galerkin, finite-element, finite-difference and finite-volume methods; etc.

This Special Issue compiles articles with the aim of showing and explaining/describing the different mathematical processes used to solve mechanisms and machines problems. Special attention is devoted to: analysis and synthesis of mechanisms and machines; linear and nonlinear mechanical systems; transportation engineering (cars, trains, ships, ...); vibrations data analysis and machine learning; and kinematics, dynamics and control in biomechanics, mechatronics and micro-machines.

an Open Access Journal by MDPI

Leicester LE1 9BH, UK

Message from the Editor-in-Chief

The journal *Mathematics* publishes high-quality, refereed papers that treat both pure and applied mathematics. The journal highlights articles devoted to the mathematical treatment of questions arising in physics, chemistry, biology, statistics, finance, computer science, engineering and sociology, particularly those that stress analytical/algebraic aspects and novel problems and their solutions. One of the missions of the journal is to serve mathematicians and scientists through the prompt publication of significant advances in any branch of science and technology, and to provide a forum for the discussion of new scientific developments.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), RePEc, and other databases.

Journal Rank: JCR - Q1 (Mathematics) / CiteScore - Q1 (General Mathematics)
