Special Issue

Artificial Intelligence Applications in Complex Networks, 2nd Edition

Message from the Guest Editor

In recent years, network theory has become the core of the interdisciplinary study of complex systems. Graph theory offers a simple tool that can be used to model the interactions among nonlinear dynamic units and study the emerging collective and nontrivial patterns in different fields. Artificial intelligence (AI), combined with a great volume of available data and advanced algorithms, can provide an unprecedented opportunity to explore complex system features by means of data-driven techniques. AI uses neural networks, deep learning, machine learning techniques, and supervised and unsupervised learning to automate the building of analytical models and to improve repetitive learning and discovery through data. This Special Issue invites unpublished and original contributions from different fields and areas of interest that combine AI techniques and complex networks. Topics of interest include, but are not limited to the following:

- Real-world applications to biophysical and socioeconomic phenomena;
- Processes on hypergraphs and higher-order networks and topological data analyses;
- Community detection;
- Data mining and evolutionary games in networks;
- Cognitive processes.

About the Journal

Message from the Editor-in-Chief

The journal *Mathematics* publishes high-quality, refereed papers that treat both pure and applied mathematics. The journal highlights articles devoted to the mathematical treatment of questions arising in physics, chemistry, biology, statistics, finance, computer science, engineering and sociology, particularly those that stress analytical/algebraic aspects and novel problems and their solutions. One of the missions of the journal is to serve mathematicians and scientists through the prompt publication of significant advances in any branch of science and technology, and to provide a forum for the discussion of new scientific developments.

Editor-in-Chief

Prof. Dr. Francisco Chiclana
School of Computer Science and Informatics, De Montfort University, The Gateway, Leicester LE1 9BH, UK

Author Benefits

High Visibility:
indexed within Scopus, SCIE (Web of Science), RePEc, and other databases.

Journal Rank:
JCR - Q1 (Mathematics) / CiteScore - Q1 (General Mathematics)

Rapid Publication:
manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.4 days after submission; acceptance to publication is undertaken in 2.4 days (median values for papers published in this journal in the first half of 2025).
