

Special Issue

Generalized Fractional Dynamics in Graphs and Complex Systems

Message from the Guest Editors

Random walks are among the most fundamental stochastic processes that occur ubiquitously in various interdisciplinary contexts, such as in biological networks, the foraging of animals, epidemic spreading, financial markets, human mobility patterns, friendship networks, communication in online networks, aging of living systems, anomalous transport and diffusion, and generally in the dynamics of “complex systems”. It has become apparent that there are deep connections of several aspects of the “complexity” of a system and fractional dynamic behavior exhibiting long-range correlations and self-similarity (scaling laws) with non-Markovian long memory features. This Special Issue aims to gather research articles or reviews with recent advances in wider interdisciplinary areas such as continuous-time random walks, stochastic motions in networks with long-range jumps, turbulent diffusion and motions, random search, anomalous transport phenomena, Lévy flights, stochastic motions in directed graphs, epidemic spreading, quantitative models of aging phenomena in living systems, models on fractal aspects of stochastic motions and related topics.

About the Journal

Message from the Editor-in-Chief

The journal *Mathematics* publishes high-quality, refereed papers that treat both pure and applied mathematics. The journal highlights articles devoted to the mathematical treatment of questions arising in physics, chemistry, biology, statistics, finance, computer science, engineering and sociology, particularly those that stress analytical/algebraic aspects and novel problems and their solutions. One of the missions of the journal is to serve mathematicians and scientists through the prompt publication of significant advances in any branch of science and technology, and to provide a forum for the discussion of new scientific developments.

Editor-in-Chief

Prof. Dr. Francisco Chiclana

School of Computer Science and Informatics, De Montfort University,
The Gateway, Leicester LE1 9BH, UK

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), RePEc, and other databases.

Journal Rank:

JCR - Q1 (Mathematics) / CiteScore - Q1 (General Mathematics)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.4 days after submission; acceptance to publication is undertaken in 2.4 days (median values for papers published in this journal in the first half of 2025).
