

Special Issue

Multicriteria Decision Making and the Analytic Hierarchy Process

Message from the Guest Editors

The analytic hierarchy process (AHP), a methodology proposed by Thomas L. Saaty at the end of the 1970s, is a multicriteria decision technique that has experienced great development in both theoretical and practical terms since its origins. It stands out, among other reasons, for making it possible to incorporate tangible and intangible aspects in the resolution of decision-making problems, as well as its adaptation to multiple-actor decision-making contexts. With regard to methodological developments, it is worth highlighting its extension to networks called analytic network process (ANP), which allows the incorporation of the dependence between the different elements involved in a decision-making problem. In terms of its development in practice, it has been used to support decision making in a wide variety of areas, such as industry, environment, health, education, government, etc. Both the development of methodological issues in AHP/ANP and the practical applications of this methodology in decision making remain of interest to researchers.

About the Journal

Message from the Editor-in-Chief

The journal *Mathematics* publishes high-quality, refereed papers that treat both pure and applied mathematics. The journal highlights articles devoted to the mathematical treatment of questions arising in physics, chemistry, biology, statistics, finance, computer science, engineering and sociology, particularly those that stress analytical/algebraic aspects and novel problems and their solutions. One of the missions of the journal is to serve mathematicians and scientists through the prompt publication of significant advances in any branch of science and technology, and to provide a forum for the discussion of new scientific developments.

Editor-in-Chief

Prof. Dr. Francisco Chiclana
School of Computer Science and Informatics, De Montfort University,
The Gateway, Leicester LE1 9BH, UK

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), RePEc, and other databases.

Journal Rank:

JCR - Q1 (Mathematics) / CiteScore - Q1 (General Mathematics)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.3 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the second half of 2025).
