## Natural Computing

### Message from the Guest Editors

Natural computing is a broad field of research that has gained significant focus not only because many computing models inspired by natural phenomena have proved their usefulness in solving real complex problems, but also because natural media were used successfully as support for computation. The roots of natural computing draw their strength from both theoretical computer science and the natural sciences. The paradigm shift in computer science, widening its classical notion of computation towards embedding, using, or relying on natural phenomena, represents one of the most exciting flows in interdisciplinary research. Topics like cellular automata, neural computation, swarm intelligence, evolutionary computation, membrane and (bio)molecular computing, as well as quantum computing constitute major branches of natural computing. They regard the computational aspects of developmental processes happening at the level of living organisms/cells, how they communicate and collaborate to achieve a certain goal, how the brain processes “information”, or even how interactions between atomic particles can be employed to perform computations.

## About the Journal

### Message from the Editor-in-Chief

The journal *Mathematics* publishes high-quality, refereed papers that treat both pure and applied mathematics. The journal highlights articles devoted to the mathematical treatment of questions arising in physics, chemistry, biology, statistics, finance, computer science, engineering and sociology, particularly those that stress analytical/algebraic aspects and novel problems and their solutions. One of the missions of the journal is to serve mathematicians and scientists through the prompt publication of significant advances in any branch of science and technology, and to provide a forum for the discussion of new scientific developments.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), RePEc, and other databases.

#### Journal Rank:

JCR - Q1 (Mathematics) / CiteScore - Q1 (General Mathematics)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.4 days after submission; acceptance to publication is undertaken in 2.4 days (median values for papers published in this journal in the first half of 2025).
