

Special Issue

Resilient Infrastructure: Mathematical Modeling, Assessment and Smart Sensing

Message from the Guest Editors

As big cities becoming increasingly full, there is a growing demand for infrastructures, i.e., buildings, bridges, rail transit. These facilities are functioning as cross-scale complex network systems, and their serviceability is closely related to human life, water conveyance and energy supply. Therefore, it is essential to enhance the resilience of the infrastructure using multiple modern technologies. The resilient infrastructure must be capable of avoiding catastrophic engineering failures and recovering soon to its serviceability. We propose this issue aiming to build a stage for communicating the most recent progress in achieving the resilient infrastructure by advanced computational modeling, risk assessment and smart sensing. It is believed that building resilient infrastructures will establish a more resilient and sustainably city. This Special Issue focuses on the latest development in modeling, assessment and smart sensing. New insights into the scientific knowledge or engineering practice in infrastructure resilience assessment and enhancement are also welcomed. We invite you to contribute and submit your latest research work.

About the Journal

Message from the Editor-in-Chief

The journal *Mathematics* publishes high-quality, refereed papers that treat both pure and applied mathematics. The journal highlights articles devoted to the mathematical treatment of questions arising in physics, chemistry, biology, statistics, finance, computer science, engineering and sociology, particularly those that stress analytical/algebraic aspects and novel problems and their solutions. One of the missions of the journal is to serve mathematicians and scientists through the prompt publication of significant advances in any branch of science and technology, and to provide a forum for the discussion of new scientific developments.

Editor-in-Chief

Prof. Dr. Francisco Chiclana
School of Computer Science and Informatics, De Montfort University,
The Gateway, Leicester LE1 9BH, UK

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), RePEc, and other databases.

Journal Rank:

JCR - Q1 (Mathematics) / CiteScore - Q1 (General Mathematics)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.3 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the second half of 2025).
