Polymer Representations in Theoretical and Mathematical Physics

Message from the Guest Editor

Representations of the Canonical Commutation Relations (CCR) other than (i.e., not unitarily equivalent to) the usual Schrodinger representation have long since found applications in areas of solid-state physics and field theory. The interest in this type of representation and, in particular, in what is now known as the polymer representation nevertheless grew tremendously after the development of Loop Quantum Cosmology, an approach to Quantum Cosmology inspired by Loop Quantum Gravity. Although the main application is still in Quantum Cosmology, the polymer type of quantization has recently been applied in other areas of Gravitation, notably in Black Hole physics, but also applications to gravitational waves and Statistical Physics can be found in the recent literature. Moreover, more formal aspects have been addressed, and relations with other areas of Mathematical Physics have been explored. In this Special Issue, we welcome all contributions related to the polymer representation of the CCR, from a true quantum mechanical approach to semi-classical or effective models inspired by the polymer quantization.

About the Journal

Message from the Editor-in-Chief

The journal *Mathematics* publishes high-quality, refereed papers that treat both pure and applied mathematics. The journal highlights articles devoted to the mathematical treatment of questions arising in physics, chemistry, biology, statistics, finance, computer science, engineering and sociology, particularly those that stress analytical/algebraic aspects and novel problems and their solutions. One of the missions of the journal is to serve mathematicians and scientists through the prompt publication of significant advances in any branch of science and technology, and to provide a forum for the discussion of new scientific developments.

Editor-in-Chief

Prof. Dr. Francisco Chiclana
School of Computer Science and Informatics, De Montfort University,
The Gateway, Leicester LE1 9BH, UK

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), RePEc, and other databases.

Journal Rank:

JCR - Q1 (Mathematics) / CiteScore - Q1 (General Mathematics)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.3 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the second half of 2025).
