Special Issue

Statistical Machine Learning and Bayesian Methods with Imaging Applications

Message from the Guest Editor

Bayesian modeling and statistical inference in machine learning are essential due to their significant importance in uncertainty quantifications and robustness. Ensuring the robustness and interpretability of machine learning models has emerged as a pivotal requirement for rigorous frameworks and data analysis that improve reliability and performance across diverse imaging and computer vision applications. Imaging applications include medical imaging, remote sensing, autonomous systems, augmented reality, and many more. Bayesian theory provides a principal and mathematically grounded approach to quantifying the predictive uncertainty inherent in machine learning models and various imaging data modalities. Additionally, these techniques enable researchers to create adaptable models that can generalize to intricate, complex relationships within features, infer latent variables, and achieve state-of-the-art predictive performance.

Thank you for your time, and I look forward to receiving your contributions.

About the Journal

Message from the Editor-in-Chief

The journal *Mathematics* publishes high-quality, refereed papers that treat both pure and applied mathematics. The journal highlights articles devoted to the mathematical treatment of questions arising in physics, chemistry, biology, statistics, finance, computer science, engineering and sociology, particularly those that stress analytical/algebraic aspects and novel problems and their solutions. One of the missions of the journal is to serve mathematicians and scientists through the prompt publication of significant advances in any branch of science and technology, and to provide a forum for the discussion of new scientific developments.

Editor-in-Chief

Prof. Dr. Francisco Chiclana
School of Computer Science and Informatics, De Montfort University, The Gateway, Leicester LE1 9BH, UK

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), RePEc, and other databases.

Journal Rank:

JCR - Q1 (Mathematics) / CiteScore - Q1 (General Mathematics)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.3 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the second half of 2025).
