

Special Issue

New Advances and Applications of Extreme Value Theory

Message from the Guest Editor

In recent years probabilistic and statistical aspects of extreme value analysis have attracted the interest of many researchers due to their numerous applications in climate and atmospheric science, industrial risks, geosciences, hydrology, finance, economics and insurance, biosciences, physics, and telecommunications and stochastic networks. As extremal events may lead to tremendous risks, the actuality of the intensive development of both extreme value theory and its practical outcomes is evident. This Special Issue of *Mathematics* is devoted to new theoretical advances and applications in extreme value theory. It expects to receive contributions by applied mathematicians of various profiles in the form of scientific articles showing their achievements and confirming the relevance of their current and future research. The aim of this Special Issue is to collect articles that develop methods for modeling, forecasting, and nonparametrically estimating extremal characteristics based on incomplete data and in the presence of heavy tails of the underlying distributions.

About the Journal

Message from the Editor-in-Chief

The journal *Mathematics* publishes high-quality, refereed papers that treat both pure and applied mathematics. The journal highlights articles devoted to the mathematical treatment of questions arising in physics, chemistry, biology, statistics, finance, computer science, engineering and sociology, particularly those that stress analytical/algebraic aspects and novel problems and their solutions. One of the missions of the journal is to serve mathematicians and scientists through the prompt publication of significant advances in any branch of science and technology, and to provide a forum for the discussion of new scientific developments.

Editor-in-Chief

Prof. Dr. Francisco Chiclana

School of Computer Science and Informatics, De Montfort University,
The Gateway, Leicester LE1 9BH, UK

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), RePEc, and other databases.

Journal Rank:

JCR - Q1 (Mathematics) / CiteScore - Q1 (General Mathematics)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.4 days after submission; acceptance to publication is undertaken in 2.4 days (median values for papers published in this journal in the first half of 2025).
