Message from the Guest Editors

Alteration of the ocular surface integrity occurs in a wide range of entities and may lead to serious complications, including blindness. Dry eye disease (DED) is the most common cause of ocular complaints that not only causes visual disturbances, but also affects the quality of life and incurs a high economic burden. Limbal stem cell deficiency (LSCD), characterized by a corneal epithelial defect and vascularization, causes severe visual disability, and usually necessitates surgical intervention. Squamous neoplasia is relatively common in the ocular surface. Local/topical cytotoxic and immunomodulatory agents have been used successfully to manage ocular surface squamous neoplasia (OSSN), either as a sole treatment or as an adjuvant.

This Special Issue accepts reviews and original articles containing the latest advances in the diagnosis and management of ocular surface disorders, including, but not limited to, DED, meibomian gland dysfunction, blepharitis, ocular rosacea, LSCD, aniridia-associated keratopathy, ocular surface neoplasia, ocular surface immunologic disorders (including SJS, MMP, atopic, and allergic keratoconjunctivitis), recurrent corneal erosion, etc.

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), and [other databases](#).

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
