Message from the Guest Editors

Dear Colleagues,

Kidney transplantation is universally considered the treatment of choice for end-stage renal disease. In the last two decades, tremendous advances in surgical care and immunosuppressive therapy have led to a significant reduction of peri-operative mortality and morbidity as well as cell-mediated rejection rates. However, long-term allograft survival has not improved as we would have expected. Currently, the main causes of premature transplant loss are death with function, antibody-mediated rejection, polyomavirus-associated nephropathy, and calcineurin-inhibitor nephrotoxicity. Albeit less frequently, late vascular and urological complications such as renal artery stenosis, post-biopsy arteriovenous fistulas, ureteric stricture, or allograft neoplasms do also play a role.

The present Special Issue intends to explore the impact of clinical and surgical complications on long-term renal allograft survival as well as to analyze possible prevention and treatment strategies. Both common and rare complications will be considered with the option of including narrative reviews and case reports of particular interest or exceptional didactical value.

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), and [other databases](#).

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
