Numerous types of stress factors or stressors may act on humans, either environmental (thermal stress or viral infections), metabolic (high body-mass index), or drugrelated (alcohol, nicotine, anesthetic drugs, or opioids), frequently associated with oxidative stress. On the other hand, the knowledge pharmacokinetics of pharmacodynamics may use their manipulation in therapeutic therapy, such as hypothermia, pharmacokinetic-pharmacodynamic (PKPD) models of reversal of opioid-induced respiratory depression (OIRD), or novel nano-based drug delivery systems. This Special Issue aims to collect articles specifically related to the influences of different types of stressors in pathology, new tools of diagnosis, and the possibilities to exploit their pharmacokinetics and pharmacodynamics, such as therapies using microparticles and nanoparticles, along with reviews providing information on the state of the art, ongoing research, and future perspectives in this field.

### **Editor-in-Chief**

## Prof. Dr. Edgaras Stankevičius Medical Academy, Lithuanian University of Health Sciences, Kaunas, Lithuania

## **Message from the Editor-in-Chief**

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.

#### **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed,

MEDLINE, PMC, and other databases.

**Journal Rank:** CiteScore - Q2 (*General Medicine*)
