Efficacy of Transcranial Electrical Current and Magnetic Stimulation Treatment Options for Alzheimer's Disease

Guest Editor:

Dr. Zahra Moussavi

Riverview Health Center, University of Manitoba, Winnipeg, MB. Canada

Deadline for manuscript submissions:

15 November 2024

Message from the Guest Editor

Neurodegenerative dementia, in particular Alzheimer's disease (AD), is a global crisis with no existing cure. The use of non-pharmaceutical treatments, mainly either transcranial electrical or magnetic stimulation, to induce brain neuroplasticity has been on the rise significantly in the last decade. In order to counteract the effects of neuronal death, and the particular susceptibility of cholinergic cells in AD, most pharmacological treatments rely on acetylcholinesterase inhibitors to increase the excitability of cells that respond to acetylcholine. Thus, the target of the current treatments is to increase the excitability and activity of remaining cells in order to counteract the decline in brain function.

There are several parameters to choose when designing a protocol for either transcranial electrical or magnetic stimulation of the brain as a treatment for AD. The purpose of this Special Issue is to discuss the most important contributing parameters, their pros and cons, and their efficacy with the hope that we get closer to achieving optimized non-pharmaceutical treatments for individuals affected by AD.

Editor-in-Chief

Prof. Dr. Edgaras Stankevičius Medical Academy, Lithuanian University of Health Sciences, Kaunas, Lithuania

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed,

MEDLINE, PMC, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General

Medicine)
