Message from the Guest Editors

Urolithiasis presents a very clinically important disease that can lead to renal colic, hematuria, or UTIs and cause serious complications, such as renal dysfunction or sepsis. The treatment of urolithiasis has advanced remarkably over the past few decades and is still improving. Research on metabolic tests or drug treatment aiming to reduce the incidence or recurrence rate of this disease has been actively conducted, and drug research for medical expulsive therapy has also progressed significantly. Surgery has progressed due to the development of endoscopic equipment such as the ureterorenoscope and nephroscope; lithotripters, including lasers; and essential surgical equipment, such as stone baskets, guidewire, and access sheaths. In addition, extracorporeal shock wave lithotripsy has been continuously advanced through the development of lithotripsy and research on appropriate indications and shock wave frequency and time.

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), and [other databases](#).

Journal Rank: CiteScore - Q2 (*General Medicine*)
