Message from the Guest Editor

Dear Colleagues,

The management of transient ischemic attack (TIA) has gained significant attention in the last decade after relevant studies that indicated how early management improves the natural evolution of these patients. At present, some issues related to TIA remain with great clinical interest, such as: sex differences in the clinical presentation and outcomes after TIA, long-term risk of stroke recurrence and risk of major vascular events, usefulness of clinical scales to different mimic events from TIA events, and the preconditioning effect of recent previous TIA events.

We welcome research that gives evidence about short- and long-term outcomes after TIA, improving the management and diagnosis process of TIA.

Areas of interest include, but are not limited to, the following:

- Original research papers and reports on mechanisms of TIA;
- Trial human study protocols of TIA;
- Results of registries in TIA patients;
- Review articles in the field of TIA;
- Results of intensive management in TIA patients.

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
