

## Special Issue

# Clinical Practice and Future Challenges in Abdominal Surgery

### Message from the Guest Editors

In recent years, significant progress has been made in the field of abdominal surgery, driven by technological innovations, advanced surgical methods, and a deeper understanding of disease mechanisms and patient-centered care. This Special Issue, entitled “Clinical Practice and Future Challenges in Abdominal Surgery”, will examine current practice and future perspectives regarding diagnosis, treatment, and prognosis in abdominal disorders in both elective and emergency settings. The scope of this Special Issue encompasses benign, inflammatory, and malignant diseases of the gastrointestinal tract, including the hepato-pancreato-biliary system and proctology, as well as various treatment modalities (endoscopic, surgical, interventional, and hybrid procedures). We are interested in papers presenting techniques and treatment scenarios and their short- and long-term outcomes. Submissions on subjects such as the education and training of new surgeons in abdominal surgery are also welcome. Authors are welcome to submit original articles, clinical outcome studies, comparative studies, narrative reviews, scoping reviews, and systematic reviews and meta-analyses.
