

## Special Issue

# Clinical Research in the Diagnosis and Treatment of Pediatric Endocrinology

### Message from the Guest Editors

Over the last few decades, the rising incidence of pediatric endocrine and metabolic diseases has drawn increased attention due to the prevalence of childhood obesity and diabetes. The possible important cause is the "modern" lifestyle that includes significant changes in diet and physical activity compared to the patterns practiced several decades ago. In addition to metabolic diseases, related endocrine diseases, including vitamin D deficiency and thyroid-gonad disorders, also contribute to poor clinical complications and difficulties regarding management.

Given the complexity of this topic and its impact on growth and pubertal development, *Medicina* is launching a Special Issue entitled "Clinical Research in the Diagnosis and Treatment of Pediatric Endocrinology", with the aim of providing a forum for recent advances in pediatric endocrine and metabolic diseases. We welcome all investigators in the field to submit their patient-oriented epidemiological research and clinical studies focusing on the diagnosis and treatment of pediatric endocrine and metabolic disease. Case reports, meta-analyses, and review articles are also welcome.

## About the Journal

### Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.
