Advances in Diagnosis and Treatment of Cervical Cancer

Message from the Guest Editors

In recent decades, the occurrence of cervical cancer has shown a downward trend, particularly in developed countries, due to significant progress in screening programs. Treatment options for cervical cancer vary based on specific prognostic factors and tumor-related characteristics, ranging from surgery in early-stage disease to radio-chemotherapy for locally advanced cases. Recent clinical trials have demonstrated the feasibility and oncological safety of less radical surgery for early-stage cervical cancer, substantially reducing surgical complications. At the same time, advancements in our understanding of invasive carcinoma have led to increasingly effective therapeutic approaches, including innovative immunotherapies showing promising results. This Special Issue aims to explore and synthesize the latest evidence on the optimal diagnosis and treatment of cervical cancer. We warmly invite authors to contribute systematic reviews, meta-analyses, narrative reviews, and original research articles to this Special Issue.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief

Prof. Dr. Edgaras Stankevičius
