

## Special Issue

# Novel Echocardiographic Techniques for the Assessment of Cardiovascular Disease

### Message from the Guest Editor

Echocardiography is a noninvasive and reproducible method that may aid in the diagnosis and risk stratification in patients with cardiovascular disease or cardiovascular risk factors.

The aim of this Special Issue is to analyze the echocardiographic techniques which can detect early alteration in cardiac function, provide additive information for diagnosis or prognosis and reveal response to therapy.

There is a wide spectrum of topics suitable for this Special Issue, provided they highlight novel echocardiographic technologies, such as speckle tracking echocardiography, contrast echocardiography, 3D echocardiography, stress echocardiography and coronary flow reserve by doppler echocardiography. Moreover, echocardiography has additive prognostic value on top of clinical situation and serum biomarkers. Furthermore, the echocardiographic assessment of aorta and peripheral vasculature is of great importance for the detailed evaluation of each patient.

The papers that we are soliciting are research articles and reviews. Case reports might be included if they are of special interest and if the echocardiography is crucial for patient handling.

## About the Journal

### Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.
