### Message from the Guest Editors

Hematological malignancies represent a heterogeneous group of cancers that originate in bone-marrow-derived cells. Their impact on global mortality is substantial, accounting for more than 7% of cancer deaths worldwide. They are characterized by various clinical, histopathologic, and genetic patterns that influence prognosis and therapeutic response.

Due to the illness-related complications and the side effects of intensive therapeutic protocols, with infections being a frequent problem, patients diagnosed with a type of blood cancer often require prolonged and expensive hospitalization. New therapeutic approaches, including targeted therapy drugs, become available either as an approved treatment option or in clinical trials for patients with hematological malignancies, aiming to improve the survival rate and increase the quality of life.

We invite specialists in the field of hematology to submit original research articles or reviews concerning the advances in the diagnosis, prognostication, treatment, and monitoring of blood cancers.

## About the Journal

### Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, and other databases.

#### Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
