Recent Advances in Minimally Invasive Spine Surgery

Message from the Guest Editors

With the development of minimally invasive spine surgery (MISS), new instruments and experiences have been acknowledged, and both surgery results and patient expectations are improving. From the minimally invasive microscopic technique, all kinds of indirect and endoscopic approaches are developing together with both high-definition (HD) image system and MISS surgical tools. MISS is becoming a trend that goes beyond experimental levels and replaces the conventional approach. However, compared to the development and possibility of these technologies, the analysis is still insufficient, and new research and techniques should be regularly tested. This Special Issue aims to share research and experience in the field of MISS, based on different skills and specially designed instruments. The purpose is to share research results and technologies and improve the solutions for patients suffering from spinal pain. We all accept original articles, reviews, and case reports.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief

Prof. Dr. Edgaras Stankevičius
Medical Academy, Lithuanian University of Health Sciences, Kaunas,
Lithuania

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
