

## Special Issue

# Orthopedic Trauma: Surgical Treatment and Rehabilitation

### Message from the Guest Editors

An increasingly active and aging elderly population has led to an increase in the number of orthopedic trauma cases. In addition, as interest in function after treatment increases, receiving appropriate surgical treatment and rehabilitation, rather than simply achieving healing, is considered important not only to surgeons but also to patients. For these reasons, studies on surgical treatment, outcomes, and further appropriate rehabilitation in relation to orthopedic trauma are likely to arouse readers' interest. Therefore, we invite prominent orthopedic surgeons to report experiences and provide relevant information related to the topic for this Special Issue of *Medicina*, entitled "Orthopedic Trauma: Surgical Treatment and Rehabilitation". Submissions of clinical contributions regarding orthopedic trauma, such as sprains, fractures, dislocations, tendon and/or ligament rupture, and any type of surgery and rehabilitation are welcome for consideration for this Special Issue.
