Special Issue

Effects of Abdominal Hysterectomy on Gynecological Patients

Message from the Guest Editors

Hysterectomy is one of the most frequently performed surgical procedures worldwide. Hysterectomy can be performed for benign disease, oncology, or hemodynamic instability in emergency cases of metrorrhagia. Over the years, several concerns have arisen about patients' quality of life, pelvic stability, vascular, ureteral, and bowel complications after hysterectomy. However, hysterectomy remains a necessary treatment in case of gynecological oncological pathology, or life-saving treatment in case of emergency. This Special Issue aims to review the role of hysterectomy in various gynecological diseases. Furthermore, the different laparotomic, laparoscopic, and robotic surgical approaches will be reviewed and the latest technologies for performing hysterectomy will be investigated. We are inviting original articles, systematic reviews, and meta-analyses to this issue.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief

Prof. Dr. Edgaras Stankevičius

Medical Academy, Lithuanian University of Health Sciences, Kaunas, Lithuania

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
