

## Special Issue

# Clinical and Surgical Updates on Bariatric Surgery

### Message from the Guest Editor

Obesity is nowadays considered a worldwide epidemic condition, and bariatric surgery is one of the most effective available treatments, in addition to emergent medications and lifestyle changes. In this respect, thousands of bariatric procedures (restrictive, malabsorptive, and mixed) are currently being performed around the world, with an exponentially increasing trend and outcome. Several authors, in fact, largely demonstrated the remission of obesity's comorbidities (i.e., hypertension, diabetes, and hyperuricemia) with long-lasting results. Conversely, with the widespread use of surgical bariatric procedures, several sequelae have been largely reported, such as the de novo gastroesophageal reflux disease after sleeve gastrectomy or the biliary reflux after one anastomose gastric by-pass. The scope of this Special Issue is to provide an overview of recent advances in the field of bariatric surgery, especially focusing on the technical refinement and new surgical approaches able to reduce the abovementioned complications. Therefore, researchers in the field of bariatric surgery are encouraged to submit an original article or review to this Special Issue.

### Guest Editor

Dr. Claudio Gambardella

Department of Advanced Since and Surgery, General, Mini-Invasive, Oncological and Obesity Surgery, Luigi Vanvitelli University of Campania, Naples, Italy

### Deadline for manuscript submissions

30 September 2025

## About the Journal

### Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.
